HELP US HELP YOU

Before using your range, read this guide carefully.

It is intended to help you operate and maintain your new range properly.

Keep it handy for answers to your questions.

If you don't understand something or need more help, write (include your phone number):

Consumer Affairs
GE Appliances
Appliance Park
Louisville, KY 40225

Write down the model and serial numbers.

You'll find them on a label behind the range door or behind the storage drawer.

These numbers are also on the Consumer Product Ownership Registration Card that came with your range. Before sending in this card, please write these numbers here:

Model Number

Serial Number

Use these numbers in any correspondence or service calls concerning your range.

If you received a damaged range...

Immediately contact the dealer (or builder) that sold you the range.

Save time and money. Before you request service...

Check the Problem Solver in the back of this guide. It lists causes of minor operating problems that you can correct yourself.

IF YOU NEED SERVICE

To obtain service, see the Consumer Services page in the back of this guide.

We're proud of our service and want you to be pleased. If for some reason you are not happy with the service you receive, here are three steps to follow for further help.

FIRST, contact the people who serviced your appliance. Explain why you are not pleased. In most cases, this will solve the problem.

NEXT, if you are still not pleased, write all the details—including your phone number—to:

Manager, Consumer Relations
GE Appliances
Appliance Park
Louisville, KY 40225

FINALLY, if your problem is still not resolved, write:

Major Appliance Consumer Action Panel
20 North Wacker Drive
Chicago, IL 60606

IMPORTANT SAFETY INSTRUCTIONS

Read all instructions before using this appliance.

IMPORTANT SAFETY NOTICE

- The California Safe Drinking Water and Toxic Enforcement Act requires the Governor of California to publish a list of substances known to the state to cause birth defects or other reproductive harm, and requires businesses to warn customers of potential exposure to such substances.
- The fiberglass insulation in self-clean ovens **gives** off a very small amount of carbon monoxide during the cleaning cycle. Exposure can be minimized by venting with an open window or using a ventilation fan or hood.
- Fluorescent light bulbs contain mercury. If your model has a surface light, you must recycle the fluorescent light bulb according to local, state and federal codes.

When using electrical appliances, basic safety precautions should be followed, including the following:

- Use this appliance only for its intended use as described in this guide.
- Be sure your appliance is properly installed and grounded by a qualified technician in accordance with the provided installation instructions.
- Do not attempt to repair or replace any part of your range unless it is specifically recommended in this guide. All other servicing should be referred to a qualified technician.
- Before performing any service, **DISCONNECT THE RANGE POWER SUPPLY AT THE HOUSEHOLD DISTRIBUTION PANEL BY REMOVING THE FUSE OR SWITCHING OFF THE CIRCUIT BREAKER.**
- **CAUTION: ITEMS OF INTEREST TO CHILDREN SHOULD NOT BE STORED IN CABINETS ABOVE A RANGE OR ON THE BACKSPASH OF A RANGE & CHILDREN CLIMBING ON THE RANGE TO REACH ITEMS COULD BE SERIOUSLY INJURED.**

▲ WARNING—

All ranges can tip and injury could result. To prevent **accidental** tipping of the range, attach it to the wall and floor by installing the Anti-Tip device supplied.

To check if the device is installed and engaged properly, remove the kick panel or storage drawer and inspect the rear leveling leg. Make sure it fits securely into the slot.

If you pull the range out from the wall for any reason, make sure the device is properly engaged when you push the range back against the wall. If it is not, there is a possible risk of the range tipping over and causing injury if you or a child stand, sit or lean on an open door.

Please refer to the Anti-Tip device information in this guide. Failure to take this precaution could result in tipping of the range and injury.

- Do not leave children **alone**—children should not be left alone or unattended in an area where an appliance is in use. They should never be allowed to sit or stand on any part of the appliance.
- Do not allow anyone to climb, stand or hang on the door, drawer or **cooktop**. They could damage the range and even tip it over, causing severe personal injury.
- Do not store flammable materials in an oven or near the **cooktop**.
- Never wear loose-fitting or hanging garments while using the appliance. Be careful when reaching for items stored over the range. Flammable material could be ignited if brought in contact with hot surface units or heating elements and may cause severe burns.

- Use only dry pot holders—moist or damp pot holders on hot surfaces may result in burns from steam. Do not let pot holders touch hot surface units or heating elements. Do not use a towel or other bulky cloth.

(continued next page)

IMPORTANT SAFETY INSTRUCTIONS

(continued)

- For your safety, never use your appliance for warming or heating the room.
- **DO NOT STORE OR USE COMBUSTIBLE MATERIALS, GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.**
- Keep the hood and grease filters clean to maintain good venting and to avoid grease fires.
- Do not let cooking grease or other flammable materials accumulate in or near the range.

- Do not use water on grease fires. Never pick up a flaming pan. Turn the controls off. Smother a flaming pan on a surface unit by covering the pan completely with a well-fitting lid, cookie sheet or flat tray. Use a multi-purpose dry chemical or foam-type fire extinguisher.

Flaming grease outside a pan can be put out by covering it with baking soda or, if available, by using a multi-purpose dry chemical or foam-type fire extinguisher.

Flame in the oven can be smothered completely by closing the oven door and turning the oven off or by using a multi-purpose dry chemical or foam-type fire extinguisher.

- Do not touch the surface units, the heating elements or the interior surface of the oven. These surfaces may be hot enough to burn even though they are dark in color. During and after use, do not touch, or let clothing or other flammable materials contact the surface units, areas nearby the surface units or any interior area of the oven; allow sufficient time for cooling, first.

Potentially hot surfaces include the cooktop, areas facing the cooktop, oven vent opening, surfaces near the opening, crevices around the oven door and metal trim parts above the door.

Remember: The inside surface of the oven may be hot when the door is opened.

- When cooking pork, follow the directions exactly and always cook the meat to an internal temperature of at least 170°F. This assures that, in the remote possibility that trichina may be present in the meat, it will be killed and the meat will be safe to eat.

Oven

- Stand away from the range when opening the oven door. Hot air or steam which escapes can cause burns to hands, face and/or eyes.
- Do not heat unopened food containers. Pressure could build up and the container could burst, causing an injury.
- Keep the oven vent duct unobstructed.

- Keep the oven free from grease buildup.

- Place the oven shelf in the desired position while the oven is cool. If the shelves must be handled when hot, do not let a pot holder contact the heating elements.
- **Pulling** out the shelf to the shelf stop is a convenience in lifting heavy foods. It is also a precaution against burns from touching hot surfaces of the door or oven walls.
- When using cooking or roasting bags in the oven, follow the manufacturer's directions.
- Do not use your oven to dry newspapers. If overheated, they can catch fire.
- Do not use oven for a storage area. Items stored in an oven can ignite.
- Do not leave paper products, cooking utensils or food in the oven when not in use.

Self-Cleaning Oven

- Do not clean the door gasket. The door gasket is essential for a good seal. Care should be taken not to rub, damage or move the gasket.
- Do not use oven cleaners. No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the oven. Residue from oven cleaners will damage the inside of the oven when the self-clean cycle is used.
- Clean only parts listed in this Use and Care Guide.
- Before self-cleaning the oven, remove the broiler pan, grid and other cookware.
- Be sure to wipe up excess **spillage** before starting the self-cleaning operation.
- If the self-cleaning mode malfunctions, turn the oven off and disconnect the power supply. Have it serviced by a qualified technician.

Surface Cooking Units

- Use proper pan **size**—Select cookware having flat bottoms large enough to cover the surface unit heating element. The use of undersized cookware will expose a portion of the heating element to direct contact and may result in ignition of clothing. Proper relationship of the cookware to the surface unit will also improve efficiency.
- Never leave the surface units unattended at high heat settings. Boilovers cause smoking and greasy spillovers that may catch on fire.
- Be sure the drip pans and vent duct are not **covered and are in place**. Their absence during cooking could damage range parts and wiring.
- Do **not use aluminum foil to line drip pans** or anywhere in the oven except as described in this guide. Misuse could result in a shock, fire hazard or damage to the range.
- **Only certain types of glass, glass/ceramic, earthenware or other glazed containers are suitable for cooktop service**; others may break because of the sudden change in temperature.
- To **minimize the possibility of burns**, ignition of flammable materials and spillage, the handle of a container should be turned toward the center of the range without extending over nearby surface units.
- Always turn the surface units off before removing cookware.

- To **avoid the possibility of a burn or electric shock**, always be certain that the controls for all surface units are at the off position and all coils are cool before attempting to lift or remove the unit.
- Do **not immerse or soak removable surface units**. Do **not put them in a dishwasher**. Do **not self-clean the surface units in the oven**.
- When flaming foods are under the hood, turn the fan off. The fan, if operating, may spread the flame.

-
- Keep an eye on foods being fried at high or medium high heat settings.
 - Foods for frying should be as dry as possible. Frost on frozen foods or moisture on fresh foods can cause hot fat to bubble up and over the sides of the pan.
 - Use little fat for effective shallow or deep-fat frying. Filling the pan too full of fat can cause spillovers when food is added.
 - If a combination of oils or fats **will be used in frying**, stir together before heating, or as fats melt slowly.
 - Always heat fat slowly, and watch as it heats.
 - Use a **deep fat thermometer** whenever possible to prevent overheating fat beyond the smoking point.

**SAVE THESE
INSTRUCTIONS**

FEATURES OF YOUR RANGE

Not all features on all models.

JBP55
JBP56
JBP58

Feature Index Not all models have all features.	Explained on page
1 Storage Drawer (on some models)	3,29
2 Anti-Tip Device See the Installation Instructions.	3,25, 30,32
3 Broil Element	4,20,29
4 Oven Door Latch Use for self-cleaning only.	14,16,18,20,22-25
5 Surface Unit “ON” Indicator Lights	8,9
6 Surface Light (on some models)	9,27
7 Surface Unit Control Knobs	8,9,27
8 Oven Light Switch (on some models)	13
9 Oven Control, Clock and Timer	11, 12,27
10 Surface Light Switch	9
11 Broiler Pan and Grid (on some models) Do not clean in the self-cleaning oven.	4, 18, 20-22,29
12 Oven Vent Located under right rear surface unit.	27
13 Surface Units. Drip Pans	4,5,8-10,26
14 Cooktop / Lift-Up Cooktop (on some models)	26,29
15 Model and Serial Number Location Located behind the range door or behind the storage drawer.	2
16 Oven Interior Light Comes on automatically when door is opened.	13,28
17 Oven Shelf Supports Shelf positions for cooking are suggested in the Baking, Roasting and Broiling sections.	13, 14, 18, 21,23,29
18 Oven Shelf with Stop-Locks (number may vary)	4, 13-15, 22,29
19 Bake Element May be lifted gently for wiping oven floor.	4,29
20 “Big View” Window	16,27,28
21 Lift-Off Oven Door with Broil Stop Position Easily removed for cleaning.	20,22,28
22 Oven Door Gasket	4,22,28
23 Anti-Tip Label	—

HOW DOES THIS COOKTOP COMPARE TO YOUR OLD ONE?

Your new cooktop has electric coil surface units. If you are used to cooking with gas burners or other types of electric cooktops, you will notice some differences when you use electric coils.

The best types of cookware to use, plus heat-up and cool-down times, depend upon the type of burner or surface unit you have.

The following chart will help you to understand the differences between electric-coil surface units and any other type of cooktop you may have used in the past.

Type of Cooktop	Description	How it Works
Electric Coil 	Flattened metal tubing containing electric resistance wire suspended over a drip pan.	Heats by direct contact with the pan and by heating the air under the pan. For best cooking results, use good quality pans. Electric coils are more forgiving of warped pans than radiant or solid disks. Heats up quickly but does not change heat settings as quickly as gas or induction. Electric coils stay hot enough to continue cooking for a short time after they are turned off.
Radiant (Glass Ceramic) Cooktop 	Electric coils under a glass-ceramic cooktop.	Heat travels to the glass surface and then to the cookware, so pans must be flat on the bottom for good cooking results. The glass cooktop stays hot enough to continue cooking after it is turned off. Remove the pan from the surface unit if you want cooking to stop.
Induction 	High frequency induction coils under a glass surface.	Pans must be made of ferrous metals (metal that attracts a magnet). Heat is produced by a magnetic circuit between the coil and the pan. Heats up right away and changes heat settings right away, like a gas cooktop. After turning the control off, the glass cooktop is hot from the heat of the pan, but cooking stops right away.
Solid Disk 	Solid cast iron disk sealed to the cooktop surface.	Heats by direct contact with the pan, so pans must be flat on the bottom for good cooking results. Heats up and cools down more slowly than electric coils. The disk stays hot enough to continue cooking after it is turned off. Remove the pan from the solid disk if you want the cooking to stop.
Gas Burners 	Regular or sealed gas burners use either LP gas or natural gas.	Flames heat the pans directly. Pan flatness is not critical to cooking results, but pans should be well balanced. Gas burners heat the pan right away and change heat settings right away. When you turn the control off, cooking stops right away.

SURFACE COOKING

At both OFF and HI the control “clicks” into position. You may hear slight “clicking” sounds during cooking, indicating the control is keeping the unit at the heat level or power level you set.

Switching heats to higher settings always shows a quicker change than switching to a lower setting.

How to Set the Controls

Push the knob in and turn in either direction to the heat setting you want.

Be sure you turn control to OFF when you finish cooking.

The surface unit “on” indicator light will glow when ANY heat on any surface unit is on.

Cooking Guide Using Heat Settings

HI—Used to begin cooking or to bring water to a boil. Reduce heat setting after water boils.

Medium High—(Setting halfway between **HI** and **MED**) Maintains a fast boil on large amounts of food.

MED—Sauté and brown; keeps food at a medium boil or simmer.

Medium Low—(Setting halfway between **MED** and **LO**) Cook after starting at **HI**; cooks with little water in covered pan.

LO—Used for long slow cooking (simmering) to tenderize and develop flavors. Use this setting to melt butter and chocolate or to keep foods warm.

NOTE: The surface unit “on” indicator light may glow between **LO** and **OFF**, but there is no power to the surface units.

Light over the Surface Units (on some models)

The switch must be pushed, held for several seconds, and released for the light to come on.

SURFACE COOKWARE TIPS

Cookware

Use medium- or heavy-weight cookware. Aluminum cookware conducts heat faster than other metals.

Cast-iron and coated cast-iron cookware are slow to absorb heat, but generally cook evenly at low to medium heat settings. Steel pans may cook unevenly if not combined with other metals.

For best cooking results pans should be flat on the bottom. Match the size of the saucepan to the size of the surface unit. The pan should not extend over the edge of the surface unit more than 1 inch.

(continued next page)

SURFACE COOKWARE TIPS

(continued)

Deep Fat Frying

Do not overfill cookware with fat that may spill over when adding food. Frosty foods bubble vigorously. Watch food frying at high temperatures. Keep the range and hood clean from grease.

Wok Cooking

We recommend that you use only a flat-bottomed wok. They are available at your local retail store.

Do not use woks that have support rings. Use of these types of woks, with or without the ring in place, can be dangerous. Placing the ring over the surface unit will cause a **build-up** of heat that will damage the porcelain cooktop. Do not try to use such woks without the ring. You could be seriously burned if the wok tipped over.

HOME CANNING TIPS

Canning should be done on surface units **only**.

Pots that extend beyond one inch of surface unit's drip pan are not recommended for most surface cooking. However, when canning with water-bath or pressure canner, larger-diameter pots may be used. This is because boiling water temperatures (even under pressure) are not harmful to cooktop surfaces surrounding the surface units.

HOWEVER, DO NOT USE LARGE DIAMETER CANNERS OR OTHER LARGE DIAMETER POTS FOR FRYING OR BOILING FOODS OTHER THAN WATER. Most syrup or sauce mixtures—and all types of frying—cook at temperatures much higher than boiling water. Such temperatures could eventually harm cooktop surfaces surrounding surface units.

Observe the Following Points in Canning

1. Be sure the canner fits over the center of the surface unit. If your range or its location does not allow the canner to be centered on the surface unit, use smaller diameter pots for good canning results.
2. For best results, use canners with flat bottoms. Canners with flanged or rippled bottoms (often found in enamelware) do not make good contact with the surface unit and take a long time to boil water.

RIGHT

WRONG

Flat-bottomed canners are recommended.

3. When canning, use recipes and procedures from reputable sources. Reliable recipes and procedures are available from the manufacturer of your canner; manufacturers of glass jars for canning, such as Ball and Kerr; and the United States Department of Agriculture Extension Service.
4. Remember that canning is a process that generates large amounts of steam. To avoid burns from steam or heat, be careful when canning.

NOTE: If your house has low voltage, canning may take longer than expected, even though directions have been carefully followed.

The process time will be shortened by:

- (1) using a pressure canner, and
- (2) starting with **HOT** tap water for fastest heating of large quantities of water.

FEATURES OF YOUR OVEN CONTROL

1. **CLEAR/OFF.** Press this pad to cancel all oven operations except clock and timer.
2. **PROGRAM STATUS.** Words light up in the display to indicate what is in time display.
Programmed information can be displayed at any time by pressing the pad of the operation you want to see. For example, you can display the current time of day while the timer is counting down by pressing the CLOCK pad.
3. **TIME DISPLAY.** Shows the time of day, the times set for the timer or automatic oven operation.
4. **OVEN TEMPERATURE AND BROIL DISPLAY.** Shows the oven temperature or the broil setting selected.
5. **FUNCTION INDICATORS.** Lights up to show whether oven is in the bake, broil or self-clean mode.
6. **INCREASE.** Short taps to this pad increase the time or temperature by small amounts. Press and hold the pad to increase the time or temperature by larger amounts.
7. **TIMER ON/OFF.** Press this pad to select the timer function. The timer does not control oven operations. The timer can time up to 9 hours and 55 minutes.
To set the timer, first press the TIMER ON/OFF pad. Then press the INCREASE or DECREASE pad to change the time.
To cancel the timer, press and hold the TIMER ON/OFF pad until the word "TIMER" disappears from the display.
8. **CLOCK.** Press this pad before setting the clock. To set the clock, first press the CLOCK pad. Then press the INCREASE or DECREASE pad to change the time of day. Press the CLOCK pad to start.
9. **STOP TIME.** Use this pad along with the COOK TIME or the CLEAN pad to set the oven to stop automatically at a time you select.
10. **COOK TIME.** Press this pad for Timed Bake operations.
11. **AUTO SELF CLEAN.** Press this pad to select the self-cleaning function. See the Operating the Self-Cleaning Oven section.
12. **BROIL.** Press this pad to select the broil function.
13. **BAKE.** Press this pad to select the bake function.
14. **DECREASE.** Short taps to this pad decrease the time or temperature by small amounts. Press and hold the pad to decrease the time or temperature by larger amounts.

If "F- and a number" flash in the display and the oven control signals, this indicates function error code. If function error code appears during the self-cleaning function, check the oven door latch—the latch handle may have been moved, even if only slightly, from the latched position. Make sure handle is to the right as far as it will go. Press the CLEAR/OFF pad. Allow the oven to cool for one hour. If function error code repeats, disconnect power to the range and call for service.

OVEN CONTROL, CLOCK AND TIMER

Clock

The clock must be set for the automatic oven timing functions to work properly. The time of day cannot be changed during a Timed Baking or Self-Cleaning cycle.

To Set the Clock

1. Press the CLOCK pad.

CLOCK

n

2. Press the INCREASE or DECREASE pad to set the time of day.
3. Press the CLOCK pad to start.

Timer

The timer is a minute timer only.

The timer does not control oven operations.
The maximum setting on the timer is 9 hours and 55 minutes.

To Set the Timer

1. Press the TIMER ON/OFF pad.

2. Press the INCREASE or DECREASE pad to set the amount of time on timer. The timer will start automatically within a few seconds of releasing the pad.

The timer, as you are setting it, will display seconds until 1 minute is reached. Then it will display minutes and seconds until 60 minutes is reached.

After 60 minutes, it will display hours ("HR" now appears in the display) and minutes until the maximum time of 9 hours and 55 minutes is reached.

To Reset the Timer

If "TIMER" is displayed, press the INCREASE or DECREASE pad until the desired time is reached.

If "TIMER" is not displayed, press the TIMER pad first. then follow the instructions above to set the timer.

To Cancel the Timer

Press and hold the TIMER ON/OFF pad until the word "TIMER" disappears from the display.

Power Outage

After a power outage, when power is restored, the display will flash and time shown will no longer be correct—for example, after a 5-minute power interruption the clock will be 5 minutes slow. All other functions that were in operation when the power went out will have to be programmed again.

End of Cycle Tone

The end of cycle tone is a series of 3 beeps followed by 1 beep every 6 seconds. If you would like to remove the signal that beeps every 6 seconds, press and hold the CLEAR/OFF pad for 10 seconds.

To return the signal that beeps every 6 seconds, press and hold the CLEAR/OFF pad for 10 seconds.

Display Messages

If "door" appears in the display, the door latch handle is not moved all the way to the right. Move the latch handle and cleaning will start. If "LOCK" appears in the display, the oven door is in the locked position. BAKE, BROIL and COOK TIME cannot be set if the door is in the locked position.

USING YOUR OVEN

Before Using Your Oven

1. Look at the controls. Be sure you understand how to set them properly. Read over the directions for the Oven Controls so you understand how to use them.
2. Check the oven interior. Look at the shelves. Take a practice run at removing and replacing them properly, to give sure, sturdy support.
3. Read over the information and tips that follow.
4. Keep this guide handy so you can refer to it, especially during the first weeks of using your new range.

Oven Shelves

The shelves are designed with stop-locks so that when placed correctly on the shelf supports, they will stop before coming completely out from the oven, and will not tilt when removing food from or placing food on them.

When placing cookware on a shelf, pull the shelf out to the bump on the shelf support. Place the cookware on the shelf, then slide the shelf back into the oven. This will eliminate reaching into the hot oven.

To **remove the shelves from the oven**, pull toward you, tilt the front end upward and pull them out.

To **replace**, place the shelf on the shelf support with the stop-locks (curved extension under the shelf) facing up toward the rear of the oven. Tilt up the front and push the shelf toward the back of the oven until it goes past the bump on the shelf support. Then lower the front of the shelf and push it all the way back.

Shelf Positions

The oven has 4 shelf supports as identified in this illustration as A (bottom), B, C and D (top).

Shelf positions for cooking are suggested in the Baking, Roasting and Broiling sections.

Oven Light (on some models)

The light comes on automatically when the oven door is opened.

On models with an oven window, use the switch to turn the light on and off when the door is closed.

BAKING

Do not lock the oven door with the latch during baking. The latch is used for self-cleaning only.

Your oven temperature is controlled very accurately using an oven control system. We recommend that you operate the range for a number of weeks using the time given on recipes as a guide to become familiar with your new oven's performance.

If you think an adjustment is necessary, see the *Adjust the Oven Thermostat* section. It gives easy *Do It Yourself* instructions on how to adjust the thermostat.

NOTE: When the oven is hot, the top and outside surfaces of the range get hot too.

How to Set Your Range for Baking

To **avoid possible burns**, place the shelves in the correct position before you turn the oven on.

1. Press the **BAKE** pad.

BAKE

n _____

2. Press the **INCREASE** or **DECREASE** pad.

The last oven set temperature appears in the display. Continue pressing until the desired temperature is displayed.

The word "ON" and "100°" will be displayed. As the oven heats up, the display will show the changing temperature. When the oven reaches the temperature you set, a tone will sound.

3. Press the **CLEAR/OFF** pad when baking is finished and then remove the food from the oven.

To change the oven temperature during the BAKE cycle, press the **BAKE** pad and then the **INCREASE** or **DECREASE** pad to get the new temperature.

Oven Shelves

Arrange the oven shelf or shelves in the desired locations while the oven is cool. The correct shelf position depends on the kind of food and the browning desired.

As a general rule, place most foods in the middle of the oven, on either shelf positions B or C. See the chart for suggested shelf positions. B will be used more than C.

Type of Food	Shelf Position
Angel food cake	A
Biscuits or muffins	B or C
Cookies or cupcakes	B or C
Brownies	B or C
Layer cakes	B or C
Bundt or pound cakes	A or B
Pies or pie shells	B or C
Frozen pies	A (on cookie sheet)
Casseroles	B or C
Roasting	A or B

Preheating

Preheat the oven if the recipe calls for it. Preheat means bringing the oven up to the specified temperature before putting the food in the oven. To preheat, set the oven at the correct temperature—selecting a higher temperature does not shorten preheat time.

Preheating is necessary for good results when baking cakes, cookies, pastry and breads.

For most casseroles and roasts, preheating is not necessary. For ovens without a preheat indicator light or tone, preheat 10 minutes. After the oven is preheated, place the food in the oven as quickly as possible to prevent heat from escaping.

Baking Pans

Use the proper baking pan. The type of finish on the pan determines the amount of browning that will occur.

- Dark, rough or dull pans absorb heat resulting in a browner, crisper crust. Use this type for pies.
- Shiny, bright and smooth pans reflect heat, resulting in a lighter, more delicate browning. Cakes and cookies require this type of pan.
- Glass baking dishes also absorb heat. When baking in glass baking dishes, the temperature may need to be reduced by 25°F.

Pan Placement

For even cooking and proper browning, there must be enough room for air circulation in the **oven**. Baking results will be better if baking pans are centered as much as possible rather than being placed to the front or to the back of the oven.

Pans should not touch each other or the walls of the oven. Allow 1- to 1 ½-inch space between pans as well as from the back of the oven, the door and the sides. If you need to use two shelves, stagger the pans so one is not directly above the other.

Baking Guides

When using prepared baking mixes, follow package recipe or instructions for the best baking results.

Cookies

When baking cookies, flat cookie sheets (without sides) produce better-looking cookies. Cookies baked in a jelly roll pan (short sides all around) may have darker edges and pale or light browning may occur.

Do not use a cookie sheet so large that it touches the walls or the door of the oven. Never entirely cover a shelf with a large cookie sheet.

For best results, use only one cookie sheet in the oven at a time.

Pies

For best results, bake pies in dark, rough or dull pans to produce a browner, crisper crust. Frozen pies in foil pans should be placed on an aluminum cookie sheet for baking since the shiny foil pan reflects heat away from the pie crust; the cookie sheet helps retain it.

Cakes

When baking cakes, warped or bent pans will cause uneven baking results and poorly shaped products. A cake baked in a pan larger than the recipe recommends will usually be crisper, thinner and drier than it should be. If baked in a pan smaller than recommended, it may be undercooked and batter may overflow. Check the recipe to make sure the pan size used is the one recommended.

Aluminum Foil

Never entirely cover a shelf with aluminum foil. This will disturb the heat circulation and result in poor baking. A smaller sheet of foil may be used to catch a spillover by placing it on a lower shelf several inches below the food.

(continued next page)

BAKING

(continued)

Don't Peek

Set the timer for the estimated cooking time and do not open the door to look at your food. Most recipes provide minimum and maximum baking times such as “bake 30-40 minutes.”

DO NOT open the door to check until the minimum time. Take advantage of the “Big View” window to monitor cooking progress. Opening the oven door frequently during cooking allows heat to escape and makes baking times longer. Your baking results may also be affected.

TIMED BAKING

How to Time Bake

Do not lock the oven door with the latch during Timed Baking. The latch is used for self-cleaning only.

Your oven can be set to turn on and off automatically,

NOTE: Before beginning, make sure the oven clock shows the correct time of day.

To set the clock, first press the CLOCK pad. Press the INCREASE or DECREASE pad until correct time of day is displayed. Press the CLOCK pad to start.

How to Set Immediate Start and Automatic Stop

To **avoid possible burns**, place the shelves in the correct position before you turn the oven on.

The oven will turn on immediately and cook for a selected length of time. At the end of Cook Time the oven will turn off automatically.

1. Press the BAKE pad.

2. Press the INCREASE or DECREASE pad until the desired temperature is displayed.

3. Press the COOK TIME pad.

4. Press the INCREASE or DECREASE pad until the desired length of baking time is displayed.

The oven will start immediately. The word “ON” and “ 100°” will be displayed. The Cook Time will begin to count down. As the oven heats ^{UP}, the display will show the changing temperature. When the oven reaches the temperature you set, a tone will sound. The oven will continue to cook for the programmed amount of time, then shut off automatically.

5. At the end of Timed Baking, the display will show “0HR:00 COOK TIME” and the oven will turn off. The end of cycle tone will sound.

6. Press the CLEAR/OFF pad to clear the display if necessary. Remove the food from the oven. Remember, foods that are left in the oven continue cooking after the controls are off.

NOTE: Foods that spoil easily such as milk, eggs, fish, stuffings, poultry and pork should not be allowed to sit for more than one hour before or after cooking. Room temperature promotes the growth of harmful bacteria. Be sure that the oven light is off because heat from the bulb will speed harmful bacteria growth.

How to Set Delay Start and Automatic Stop

Quick Reminder:

1. Press the BAKE pad.
2. Press the INCREASE or DECREASE pad to select the oven temperature.
3. Press the COOK TIME pad.
4. Press the INCREASE or DECREASE pad to set the length of Cooking Time.
5. Press the STOP TIME pad.
6. Press the INCREASE or DECREASE pad until the desired Stop Time appears in the display.

To avoid possible burns, place the shelves in the correct position before you program the oven.

You can set the oven control to delay-start the oven, cook for a specific length of time and then turn off automatically.

1. Press the BAKE pad.
2. Press the INCREASE or DECREASE pad until “325°” is displayed.
3. Press the COOK TIME pad.
4. Press the INCREASE pad until “3HR:00” appears in the display. A Cook Time of 3 hours now appears in the display.
5. Press the STOP TIME pad. The display prompts you to set the Stop Time you want. It also shows the earliest Stop Time you can set. In this example, “5:00” and “STOP TIME” appear in the display.

The control automatically sets the Stop Time by adding the Cook Time to the time of day. In this example, the time of day is 2:00 and the Cook Time is 3 hours. Adding 3 hours to the time of day equals 5:00.

6. Change Stop Time from 5:00 to 7:00 by pressing the INCREASE pad until “7:00” and Stop Time appear in the display. The words “DELAY TIME [] BAKE” appear in the display.

At 4:00 the oven will turn on automatically. The word “ON” and “100°” will be displayed. The Cook Time will begin to count down. As the oven heats up, the display will show the changing temperature. The oven will cook for the programmed three hours and shut off automatically at 7:00.

7. At the end of Timed Baking, the display will show “0HR:00 COOK TIME” and the oven will turn off. The end of cycle tone will sound.

8. Press the CLEAR/OFF pad to clear the display if necessary. Remove the food from the oven. Remember, even though the oven shuts off automatically, foods continue cooking after the controls are off.

NOTE: Foods that spoil easily such as milk, eggs, fish, stuffings, poultry and pork should not be allowed to sit for more than one hour before or after cooking. Room temperature promotes the growth of harmful bacteria. Be sure that the oven light is off because heat from the bulb will speed harmful bacteria growth.

ADJUST THE OVEN THERMOSTAT—DO IT YOURSELF!

You may feel that your new oven cooks differently than the one it replaced. We recommend that you use your new oven for a few weeks to become more familiar with it, following the times given in your recipes as a guide.

If you think your new oven is too hot or too cold, you can adjust the thermostat yourself. If you think it is too hot, adjust the thermostat to make it cooler. If you think it is too cool, adjust the thermostat to make it hotter.

We do not recommend the use of inexpensive thermometers, such as those found in grocery stores, to check the temperature setting of your new oven. These thermometers may vary 20–40 degrees.

To Adjust the Thermostat:

1. Press the BAKE pad.
2. Select an oven temperature between 500°F and 550°F.
3. Immediately, before “ON” appears, press and hold the BAKE pad for about 4 seconds. The time display will change to the oven adjustment display.
4. The oven temperature can be adjusted up to (+) 35°F hotter or (–) 35°F cooler. Use the INCREASE or DECREASE pad to select the desired change in the display.
5. When you have made the adjustment, press the CLEAR/OFF pad to go back to the time of day display. Use your oven as you would normally.

NOTE: This adjustment will not affect the broiling or the self-cleaning temperatures. It will be remembered when power is removed.

ROASTING

Do not lock the oven door with the latch during roasting. The latch is used for self-cleaning only.

Roasting is cooking by dry heat. Tender meat or poultry can be roasted uncovered in your oven. Roasting temperatures, which should be low and steady, keep spattering to a minimum.

Roasting is really a baking procedure used for meats. Therefore, oven controls are set for Baking or Timed Baking. (You may hear a slight clicking sound, indicating the oven is working properly.) Timed Baking will turn the oven on and off automatically.

Most meats continue to cook slightly while standing, after being removed from the oven. The standing time recommended for roasts is 10 to 20 minutes. This allows roasts to firm up and makes them easier to carve. The internal temperature will rise about 5° to 10°F.; to compensate for temperature increase, if desired, remove the roast from the oven sooner (at 5° to 10°F. less than the temperature in the Roasting Guide).

Remember that food will continue to cook in the hot oven and therefore should be removed when the desired internal temperature has been reached.

1. Place the shelf in A or B position.
No preheating is necessary.

2. Check the weight of the meat. Place it, fat side up, (or for poultry, breast-side-up) on a roasting grid in a shallow pan. The melting fat will baste the meat. Select a pan as close to the size of the meat as possible. (The broiler pan with grid is a good pan for this.)

3. Press the BAKE pad.

BAKE

4. Press the INCREASE or DECREASE pad. The last oven set temperature appears in the display. Continue pressing until the desired temperature is displayed.

The word "ON" and "100°" will be displayed. As the oven heats up, the display will show the changing temperature. When the oven reaches the temperature you set, a tone will sound.

CLEAR
OFF

5. Press the CLEAR/OFF pad when roasting is finished.

To change the oven temperature during roasting, press the BAKE pad and then the INCREASE or DECREASE pad to get the new temperature.

Use of Aluminum Foil

You can use aluminum foil to line the broiler pan. This makes clean-up easier when using the pan for marinating, cooking with fruits, cooking heavily cured meats or basting food during cooking. Press the foil tightly around the inside of the pan.

Questions and Answers

Q. Is it necessary to check for doneness with a meat thermometer?

A. Checking the finished internal temperature at the completion of cooking time is recommended. Temperatures are shown in the Roasting Guide. For roasts over 8 lbs., check with thermometer at half-hour intervals after half the cooking time has passed.

Q. Why is my roast crumbling when I try to carve it?

A. Roasts are easier to slice if allowed to cool 10 to 20 minutes after removing them from the oven. Be sure to cut across the grain of the meat.

Q. Do I need to preheat my oven each time I cook a roast or poultry?

A. It is not necessary to preheat your oven.

Q. When buying a roast, are there any special tips that would help me cook it more evenly?

A. Yes. Buy a roast as even in thickness as possible, or buy rolled roasts.

Q. Can I seal the sides of my foil "tent" when roasting a turkey?

A. Sealing the foil will steam the meat. Leaving it unsealed allows the air to circulate and brown the meat.

ROASTING GUIDE

Frozen Roasts

Frozen roasts of beef, pork, lamb, etc., can be started without thawing, but allow 10 to 25 minutes per pound additional time (10 minutes per pound for roasts under 5 pounds, more time for larger roasts).

Make sure poultry is thawed before roasting. Unthawed poultry often does not cook evenly. Some commercial frozen poultry can be cooked successfully without thawing. Follow the directions given on the package label.

Type	Oven Temperature	Doneness	Approximate Roasting Time in Minutes per Pound		Internal Temperature °F.
Meat					
Tender cuts; rib, high quality sirloin tip, rump or top round*	325°	Rare: Medium: Well Done:	3 to 5 lbs. 24-33 35-39 40-45	6 to 8 lbs. 18-22 22-29 30-35	140°-150°† 150°-160° 170°-185°
Lamb leg or bone-in shoulder*	325°	Rare: Medium: Well Done:	21-25 25-30 30-35	20-23 24-28 28-33	140°-150°† 150°-160° 170°-185°
Veal shoulder, leg or loin*	325°	Well Done:	35-45	30-40	170°-180°
Pork loin, rib or shoulder*	325°	Well Done:	35-45	30-40	170°-180°
Ham, precooked	325°	To Warm:	17-20 minutes per pound (any weight)		115°-120°
Poultry					
Chicken or Duck	325°	Well Done:	3 to 5 lbs. 35-40	Over 5 lbs. 30-35	185°-190°
Chicken pieces	350°	Well Done:	35-40		185°-190°
Turkey	325°	Well Done:	10 to 15 lbs. 18-25	Over 15 lbs. 15-20	In thigh: 185°-190°

*For boneless rolled roasts over 6 inches thick, add 5 to 10 minutes per pound to times given above.

†The U. S. Department of Agriculture says "Rare beef is popular, but you should know that cooking it to only 140°F. means some food poisoning organisms may survive." (Source: Safe Food Book. Your Kitchen Guide. USDA Rev. June 1985.)

BROILING

Do not lock the oven door with the latch while broiling. The latch is used for self-cleaning only.

Broiling is cooking food by intense radiant heat from the upper broil element in the oven. Most fish and tender cuts of meat can be broiled. Follow these directions to keep spattering and smoking to a minimum.

Turn the food only once during broiling. Time the foods for the first side according to the Broiling Guide. Turn the food, then use the times given for the second side as a guide to the preferred doneness.

1. If the meat has fat or gristle around the edge, cut vertical slashes through both about 2 inches apart. If desired, the fat may be trimmed, leaving a layer about 1/8 inch thick.
2. Place the meat on the broiler grid in the broiler pan. Always use the grid so the fat drips into the broiler pan; otherwise the juices may become hot enough to catch on fire.
3. Position a shelf on the recommended shelf position as suggested in the Broiling Guide.
4. **Leave the door open to the broil stop position.** The door stays open by itself, yet the proper temperature is maintained in the oven.

5. Press the BROIL pad.
6. Press the INCREASE pad once for LO Broil or press the INCREASE pad twice for HI Broil.

To change from HI Broil to LO Broil, press the DECREASE pad once. To change back to HI Broil, press the INCREASE pad once.

7. When broiling is finished, press the CLEAR/OFF pad. Serve the food immediately, and leave the pan outside the oven to cool during the meal for easiest cleaning.

Use of Aluminum Foil

You can use aluminum foil to line your broiler pan and broiler grid. However, you must mold the foil tightly to the grid and cut slits in it just like the grid.

Without the slits, the foil will prevent fat and meat juices from draining to the broiler pan. The juices could become hot enough to catch on fire. If you do not cut the slits, you are frying, not broiling.

Questions and Answers

Q. Why are my meats not turning out as brown as they should?

- A.** In some areas, the power (voltage) to the range may be low. In these cases, preheat the broil element for 10 minutes before placing the broiler pan with the food in the oven. Check to see if you are using the recommended shelf position. Broil for the longest period of time indicated in the Broiling Guide. Turn the food only once during broiling.

Q. Should I salt the meat before broiling?

- A. No.** Salt draws out the juices and allows them to evaporate. Always salt after cooking. Turn the meat with tongs; piercing the meat with a fork also allows the juices to escape. When broiling poultry or fish, brush each side often with butter.

Q. When broiling, is it necessary to always use a grid in the pan?

- A.** Yes. Using the grid suspends the meat over the pan. As the meat cooks, the juices fall into the pan, thus keeping the meat drier. Juices are protected by the grid and stay cooler, thus preventing excessive spatter and smoking.

Q. Do I need to grease my broiler grid to prevent meat from sticking?

- A. No.** The broiler grid is designed to reflect broiler heat, thus keeping the surface cool enough to prevent meat from sticking to the surface. However, spraying the broiler grid lightly with a vegetable cooking spray before cooking will make clean-up easier.

BROILING GUIDE

- Always use a broiler pan and grid. They are designed to minimize smoking and spattering by trapping juices in the shielded lower part of the pan.
- **The oven door should be open to the broil stop position.**
- If desired, marinate meats or chicken before broiling, or brush with barbecue sauce last 5 to 10 minutes only.
- When arranging food on the pan, do not let fatty edges hang over the sides because dripping fat could soil the oven.
- Use LO Broil to cook foods such as poultry or thick pork chops thoroughly without over-browning them.
- Frozen steaks can be broiled by positioning the oven shelf at next lowest shelf position and increasing cooking time given in this guide 1½ times per side.

Food	Quantity and/or Thickness	Shelf Position	First Side Time, Minutes	Second Side Time, Minutes	Comments
Bacon	1/2 lb. (about 8 thin slices)	C	4½	4½	Arrange in single layer.
Ground Beef Well Done	1 lb. (4 patties) 1/2 to 3/4 inch thick	C	10	7	Space evenly. Up to 8 patties take about same time.
Beef Steaks Rare Medium Well Done	1 inch thick (1 to 1½ lbs.)	C C C	6 8 12	5 6 11	Steaks less than 1 inch thick cook through before browning. Pan frying is recommended.
Rare Medium Well Done	1½ inch thick (2 to 2½ lbs.)	C C C	10 15 25	7-8 14-16 20-25	Slash fat.
Chicken	1 whole (2 to 2½ lbs.), split lengthwise	A	35	10-15	Reduce time about 5 to 10 minutes per side for cut-up chicken. Brush each side with melted butter. Broil skin-side-down first.
Bakery Products Bread (Toast) or Toaster Pastries English Muffins	2 to 4 slices 1 pkg. (2) 2 (split)	C or D C or D	1½-2 3-4	1/2	Space evenly. Place English muffins cut-side-up and brush with butter, if desired.
Lobster Tails	2-4 (6 to 8 oz. each)	B	13-16	Do not turn over.	Cut through back of shell. Spread open. Brush with melted butter before broiling and after half of broiling time.
Fish	1-lb. fillets 1/4 to 1/2 inch thick	C	5	5	Handle and turn very carefully. Brush with lemon butter before and during cooking, if desired. Preheat broiler to increase browning.
Ham Slices (precooked)	1 inch thick	B	8	8	Increase time 5 to 10 minutes per side for 1½ inch thick or home cured ham.
Pork Chops Well Done	2 (1/2 inch thick) 2 (1 inch thick), about 1 lb.	C B	10 13	10 13	Slash fat.
Lamb Chops Medium Well Done Medium Well Done	2 (1 inch thick), about 1 () to 12 oz 2 (1½ inch thick), about 1 lb.	C C C B	10 12 14	9 10 12	Slash fat.
Wieners and similar precooked sausages, bratwurst	1-lb. pkg. (10)	C	T		[f desired, split sausages in half lengthwise; cut into 5- to 6-inch pieces.

OPERATING THE SELF-CLEANING OVEN

Normal Cleaning Time: 3 hours

Quick Reminder:

1. Latch the door.
2. Press the AUTO SELF CLEAN pad.
3. Press the INCREASE or DECREASE pad to set the Clean Time.

Before a Clean Cycle

The range must be completely cool in order to set the self-clean cycle. You may have to allow the oven to cool before you can slide the door latch.

We recommend venting with an open window or using a ventilation fan or hood during the first self-clean cycle.

1. Remove all cookware and any aluminum foil from the oven—they cannot withstand the high cleaning temperatures.

NOTE: The **oven shelves may be cleaned in the self-cleaning oven.** However, they will darken, lose their luster and become hard to slide.

2. To avoid heavy smoke in the kitchen during self-cleaning, wipe up heavy soil on the oven bottom. (If you use soap, rinse thoroughly before self-cleaning to prevent staining.) The enamel grid and broiler pan may be cleaned in the self-clean oven. However, to help prevent heavy smoke caused by self-cleaning the greasy soil in the pan, you must first clean off the excess grease.

3. Clean spatters or spills on the oven front frame, and the oven door outside the gasket with a dampened cloth. The oven front frame and the oven door outside the gasket do not get cleaned by the self-clean cycle. On these areas use detergent and hot water or a soap-filled steel wool pad. Rinse well with a vinegar and water solution. This will help prevent a brown residue from forming when the oven is heated. Buff these areas with a dry cloth. Do not clean the gasket.

Do not use abrasives or oven cleaners. Clean the top, sides and outside front of the oven door with soap and water.

Make sure the oven light bulb cover is in place.

Do not rub or clean the door gasket—the fiberglass material of the gasket has an extremely low resistance to abrasion. An intact and well-fitting oven door gasket is essential for energy-efficient oven operation and good baking results. If you notice the gasket becoming worn, frayed or damaged in any way or if it has become displaced on the door, you should have it replaced.

4. Close the door and make sure the oven light is off. If the oven light is not turned off, the life of the bulb will be shortened or it may burn out immediately.

Do not use commercial oven cleaners or oven protectors in or near the self-cleaning oven.

A combination of any of these products plus the high clean cycle temperatures may damage the porcelain finish of the oven.

How to Set the Oven for Cleaning

Quick Reminder:

1. Latch the door.
2. Press the AUTO SELF CLEAN pad.
3. Press the INCREASE or DECREASE pad to set the Clean Time.

If the oven is too hot and you start to set a clean cycle, the word "OFF" will appear in the display. Allow additional time for cooling before you try to set the cycle.

1. Follow directions to prepare the oven for cleaning.
2. Slide the latch handle to the right as far as it will go.

Never force the latch handle. Forcing the handle will damage the door lock mechanism.

3. Press the AUTO SELF CLEAN pad.

4. Press the INCREASE or DECREASE pad until the desired Clean Time is displayed.

Clean Time is normally 3 hours. You can change the Clean Time to any time between 2 and 4 hours, depending on the amount of soil in your oven.

The self-clean cycle will automatically begin after "CLEAN" is displayed and the time for the clean cycle is set. The words "ON" and "LOCK" will appear in the display. It will not be possible to open the oven door until the temperature drops below the lock temperature and the LOCK light goes off.

5. When the LOCK light is off, slide the latch handle to the left as far as it will go and open the door.

The word "door" will be displayed, the word "LOCK" will flash and oven control will signal if you set the clean cycle and forget to close the oven door.

To Stop a Clean Cycle

1. Press the CLEAR/OFF pad.
2. When the LOCK light goes off and the oven has cooled below the locking temperature, open the door.

After a Clean Cycle

After cleaning is complete, the door latch must be returned to its original position before you can use the oven. The oven door will stay locked until the oven cools. If you cannot slide the latch easily to unlock the door, allow additional time for cooling.

Never force the latch handle. The latch slides easily. Forcing the latch handle may damage the door lock.

You may notice some white ash in the oven. Just wipe it up with a damp cloth after the oven cools.

If white spots remain, remove them with a soap-filled steel wool pad. Be sure to rinse thoroughly with a vinegar and water mixture. These deposits are usually a salt residue that cannot be removed by the clean cycle.

If the oven is not clean after one clean cycle, repeat the cycle.

If the shelves have become hard to slide, wipe the shelf supports with cooking oil.

(continued next page)

OPERATING THE SELF-CLEANING OVEN

(continued)

How to Set Delay Start of Cleaning

Quick Reminder:

1. Latch the door.
2. Press the AUTO SELF CLEAN pad.
3. Press the INCREASE or DECREASE pad until desired Clean Time appears.
4. Press the STOP TIME pad.
5. Press the INCREASE or DECREASE pad until the desired Stop Time appears in the display.

Delay Start is setting the oven timer to start the clean cycle automatically at a later time than the present time of day.

NOTE: Before beginning, make sure the oven clock shows the correct time of day.

1. Follow steps to prepare the oven for cleaning.
2. Slide the latch handle to the right as far as it will go.

Never force the latch handle. Forcing the handle will damage the door lock mechanism.

3. Press the AUTO SELF CLEAN pad.

4. Press the INCREASE or DECREASE pad to enter the Clean Time.

5. Press the STOP TIME pad. "STOP TIME" and the earliest Stop Time you can set will appear in the display.

The earliest Stop Time will be the Clean Time selected plus the time of day. **For example:** If the Clean Time is 3 hours and the time of day is 6:00, the Stop Time that appears in the display will be 9:00.

6. Press the INCREASE pad to change the Stop Time to a later time of-day if desired. **For example:** If you set Stop Time at 11 :00, oven will start clean cycle at 8:00 and end at 11 :00.

The self-clean cycle will automatically begin after "CLEAN" is displayed and the time for clean cycle is set. The words "ON" and "LOCK" will appear in the display. It will not be possible to open the oven door until the temperature drops below the lock temperature and the LOCK light goes off.

7. When the LOCK light is off, slide the latch handle to the left as far as it will go and open the door.

Questions and Answers

Q. If my oven clock is not set to the correct time of day, can I still self-clean my oven?

A. If the clock is not set to the correct time of day you will not be able to set a delay clean to end at a specific time.

Q. Can I use commercial oven cleaners on any part of my self-cleaning oven?

A. No cleaners or coatings should be used around any part of this oven. If you do use them and do not thoroughly rinse the oven with water, wiping it absolutely clean afterwards, the residue can scar the oven surface and damage metal parts the next time the oven is automatically cleaned.

Q. What should I do if excessive smoking occurs during cleaning?

A. This is caused by excessive soil. Press the CLEAR/OFF pad. Open the windows to rid the room of smoke. Wait until the oven has cooled and the word "LOCK" is off in the display. Wipe up the excess soil and reset the clean cycle.

Q. Is the "crackling" or "popping" sound I hear during cleaning normal?

A. Yes. This is the sound of the metal heating and cooling during both the cooking and cleaning functions.

Q. Should there be an odor during the cleaning?

A. Yes, there will be an odor during the first few cleanings. Failure to wipe out excessive soil might also cause a strong odor when cleaning.

Q. What causes the hair-like lines on the enameled surface of my oven?

A. This is a normal condition, resulting from heating and cooling during cleaning. These lines do not affect how your oven performs.

Q. Why do I have ash left in my oven after cleaning?

A. Some types of soil will leave a deposit which is ash. It can be removed with a damp sponge or cloth.

Q. My oven shelves do not slide easily. What is the matter?

A. After many cleanings, the oven shelves will lose their luster and become hard to slide. To make the shelves slide more easily, wipe the shelf supports with cooking oil.

Q. My oven shelves have become gray after the self-clean cycle. Is this normal?

A. Yes. After the self-clean cycle, the shelves will lose some luster and change to a deep gray color.

Q. Can I cook food on the cooktop while the oven is self-cleaning?

A. Yes. While the oven is self-cleaning, you can use the cooktop just as you normally do.

Q. The word "door" appeared on the display when I selected the clean cycle. What's wrong?

A. The door latch handle must be moved all the way to the right. Move the latch handle and cleaning will start.

CARE AND CLEANING

Proper care and cleaning are important so your range will give you efficient and satisfactory service. Follow these directions carefully in caring for it to help assure safe and proper maintenance.

BE SURE ELECTRIC POWER IS OFF BEFORE CLEANING ANY PART OF THE RANGE.

A If your range is removed for cleaning, servicing or any reason, be sure anti-tip device is re-engaged properly when the range is replaced. Failure to take this precaution could result in tipping of the range and cause injury.

(continued next page)

CARE AND CLEANING

(continued)

Lift-Up Cooktop (on some models)

Some models have a cooktop that can be lifted up for easier cleaning. To make cleaning easier, the entire cooktop may be lifted up and supported in the up position.

Be sure all surface units are turned off before raising the cooktop. There are two side supports that lock into position when the cooktop is lifted up. The surface units do not need to be removed before lifting. However, you may remove one to make raising the cooktop easier.

After cleaning under the cooktop with hot, mild soapy water and a clean cloth, lower the cooktop. Be careful not to pinch your fingers.

To lower the cooktop, push the rods back and gently lower the cooktop until it rests in place.

Surface Units and Drip Pans

To clean the surface units, turn the control to the highest setting for a minute. The coils will burn off any soil.

CAUTION

- **Be sure all the controls are turned to OFF and the surface units are cool before attempting to remove them.**
- Do not immerse the surface units in liquids of any kind.
- Do not clean the surface units in a dishwasher.
- Do not bend the surface unit plug terminals.
- Do not attempt to clean, adjust or in any way repair the plug-in receptacle.

To remove a surface unit:

To remove the drip pans for cleaning, the surface units must be removed first.

Lift the surface unit about 1 inch above the drip pan and pull it out.

Do not lift the surface unit more than 1 inch. If you do, it may not lie flat on the drip pan when you plug it back in.

Repeated lifting of the surface unit more than 1 inch above the drip pan can permanently damage the receptacle.

To replace a surface unit:

- Replace the drip pan into the recess in the cooktop. Make sure the opening in the pan lines up with the receptacle.
- Insert the terminals of the surface unit through the opening in the drip pan and into the receptacle.
- Guide the surface unit into place so it rests evenly.

Drip Pans

Remove the surface units. Then lift out the drip pans.

For best results, clean the drip pans by hand.

Place them in a covered container (or a plastic bag) with 1/4 cup ammonia to loosen the soil. Then scrub with a soap filled scouring pad if necessary. Rinse with clean water and polish with a clean soft cloth.

The drip pans may also be cleaned in the dishwasher.

Black drip pans (on some models) may be cleaned in a self-cleaning oven after they have been thoroughly rinsed. However, self-cleaning them may cause them to lose their original luster and shine.

Clean the area under the drip pans often.

Built-up soil, especially grease, may catch on fire.

Do not cover the drip pans with foil. Using foil so close to the receptacle could cause shock, fire or damage to the range.

Control Panel and Knobs

Clean up any spills or spatters with a damp cloth. Remove heavier soil with warm, soapy water.

Clean the control panel with mild liquid dish detergent and a soft cloth. Rub control panel lightly.

CAUTION: Do not use abrasives of any kind on the control panel. The lettering on models with touch pads is sensitive to abrasives and pressure.

The control knobs may be removed for easier cleaning. To remove a knob, pull it straight off the stem. Wash the knobs in soap and water but do not soak.

Cooktop Surface Light (on some models)

When changing a cooktop light, do not touch the metal at the ends of the light.

The cooktop light is easily replaced with a fluorescent tube of the same wattage. Before changing the light, pull the plug to the range or disconnect the power at the main fuse or circuit breaker panel.

To remove:

- Lift the light cover by pulling the bottom edge toward you and then up.
- Place fingers on top near each end of the light.
- Roll the top of the light gently toward the front of the range and gently pull the light from the socket, making sure it does not hit the light cover.

To replace:

- Place fingers on the top near each end of the light.
- Press the light into the slots until it snaps into place.
- Move light cover down and snap into place.

Metal Parts

Do not use steel wool, abrasives, ammonia or commercial oven cleaners. To safely clean surfaces; wash, rinse and then dry with a soft cloth.

Glass Window

To clean the outside of the oven window use a glass cleaner. Rinse and polish with a dry cloth.

Painted Surfaces

Painted surfaces include the outside oven door, sides, control panel and drawer front. Clean these with soap and water or a vinegar and water solution. **Do not use commercial oven cleaners, cleansing powders, steel wool or harsh abrasives on any painted surface.**

Oven Vent

The oven is vented through an opening under the right rear surface unit. Never cover the opening with aluminum foil or any other material. This would prevent the oven vent from working properly.

(continued next page)

CARE AND CLEANING

(continued)

Lift-Off Oven Door

The oven door is removable, but it is heavy. You may need help removing and replacing the door. Do not lift the door by the handle. This can cause the glass to break or can cause damage to the door.

To **remove the door**, open it a few inches to the special stop position that will hold the door open. Grasp firmly on each side and lift the door straight up and off the hinges.

NOTE: Be careful not to place hands between the hinge and the oven door frame as the hinge could snap back and pinch fingers.

To **replace the door**, make sure the hinges are in the special stop position. Position the slots in the bottom of the door squarely over the hinges. Then lower the door slowly and evenly over both hinges at the same time. If the hinges snap back against the oven frame, pull them back out.

TO CLEAN THE DOOR:

Inside of the door:

- Because the area inside the gasket is cleaned during the self clean cycle, you do not need to clean this by hand. Any soap left on the liner causes additional stains when the oven is heated.
- The area outside the gasket can be cleaned with a scouring pad.

- **Do not rub or clean the door gasket**—the fiberglass material of the gasket has an extremely low resistance to abrasion. An intact and well-fitting oven door gasket is essential for energy-efficient oven operation and good baking results. If you notice the gasket becoming worn, frayed or damaged in any way or if it has become displaced on the door, you should have it replaced.

NOTE: The gasket is designed with a gap at the bottom to allow for proper air circulation.

Outside of the door:

- Use soap and water to thoroughly clean the top, sides and front of the oven door. Rinse well. You may also use a glass cleaner to clean the glass on the outside of the door.
- Spillage of marinades, fruit juices, tomato sauces and basting materials containing acids may cause discoloration and should be wiped up immediately. When the surface is cool, clean and rinse.
- **Do not use oven cleaners, cleansing powders or harsh abrasives on the outside of the door.**

Oven Light Replacement

CAUTION: Before replacing your oven light bulb, **disconnect the electric power for your range at the main fuse or circuit breaker panel or pull the plug.** Be sure to let the light cover and bulb cool completely before removing or replacing them. When in use, light bulbs can become warm enough to break if touched with a moist cloth or towel. When cleaning, avoid touching warm lights with cleaning cloths if the light cover is removed.

The oven light (bulb) is covered with a removable glass cover which is held in place with a wire. Remove the oven door, if desired, to reach the cover easily.

To remove:

- Hold your hand under the cover so it doesn't fall when released. With fingers of the same hand, firmly push back the wire cover holder. Lift off the cover.

DO NOT REMOVE ANY SCREWS.

- Replace bulb with 40-watt home appliance bulb.

To replace cover:

- Place it into the groove of the light receptacle. Pull the wire forward to the center of cover until it snaps in place. When in place, the wire holds the cover firmly. Be certain the wire is in the depression in the center of the cover.
- Connect electric power to the range.

Oven Shelves

Clean the shelves with an abrasive cleanser or steel wool.

After cleaning, rinse the shelves with clean water and dry with a clean cloth.

NOTE: The oven shelves may be cleaned in the self-cleaning oven, however, they will darken, lose their luster and become hard to slide. Wipe the shelf supports with cooking oil after self-cleaning to make shelves slide more easily.

Oven Heating Elements

Do not clean the bake element or the broil element. Any soil will burn off when the elements are heated.

The bake element can be lifted gently to clean the oven floor. If spillovers, residue or ash accumulate around the bake element gently wipe around the element with warm water.

Broiler Pan and Grid

After broiling, remove the broiler pan from the oven. Remove the grid from the pan. Carefully pour out the grease from the pan into a proper container. Wash and rinse the broiler pan and grid in hot water with a soap-filled or plastic scouring pad.

The enamel grid and broiler pan may be cleaned in the self-clean oven. However, to prevent heavy smoke caused by self-cleaning the greasy soil in the pan, you must first clean off the excess grease.

If food has burned on, sprinkle the grid with detergent while hot and cover with wet paper towels or a dishcloth. Soaking the pan will remove burned-on foods.

The broiler pan may be cleaned with a commercial oven cleaner. If the grid is grey enamel, it can also be cleaned with an oven cleaner. If the grid is chrome, do not use an oven cleaner to clean it.

Both the broiler pan and grid can also be cleaned in the dishwasher.

Do not store a soiled broiler pan and grid anywhere in the range.

How to Remove the Storage Drawer or Kick Panel to Clean Under the Range

The area under the range can be reached easily for cleaning by removing the bottom drawer (on some models). To remove, pull the drawer out all the way, tilt up the front and remove it. To replace, insert glides at the back of the drawer beyond the stop on range glides. Lift the drawer if necessary to insert easily. Let the front of the drawer down, then push in to close.

To clean under models with a front kick panel, remove the panel by pulling it straight out at the bottom. To replace the panel, first hook the top tabs on and then the bottom tabs.

Porcelain Enamel Cooktop

The porcelain enamel finish is sturdy but breakable if misused. This finish is acid-resistant. However, any acidic foods spilled (such as fruit juices, tomato or vinegar) should not be permitted to remain on the finish.

If acids spill on the cooktop while it is hot, use a dry paper towel or cloth to wipe it up right away. When the surface has cooled, wash with soap and water. Rinse well.

For other spills such as fat smatterings, wash with soap and water or cleansing powders after the surface has cooled. Rinse well. Polish with a dry cloth.

INSTALLATION INSTRUCTIONS

BEFORE YOU BEGIN

Read these instructions completely and carefully.

IMPORTANT: Save these instructions for the local electrical inspector's use.

IMPORTANT: OBSERVE ALL GOVERNING CODES AND ORDINANCES.

NOTE TO INSTALLER: Leave these instructions with the appliance after initiation is completed.

NOTE TO CONSUMER: Keep this Use and Care Guide and Installation Instructions for future use.

NOTE: This appliance must be properly grounded.

TOOLS YOU WILL NEED

- Large blade screwdriver
- Channel lock pliers or small ratchet wrench with 3/16" socket (for leveling range)
- 1/4" hex head nutdriver

ELECTRICAL REQUIREMENTS

CAUTION, FOR PERSONAL SAFETY:
DO NOT USE AN EXTENSION CORD WITH THIS APPLIANCE.

REMOVE HOUSE FUSE OR OPEN CIRCUIT BREAKER BEFORE BEGINNING INSTALLATION.

This appliance must be supplied with the proper voltage and frequency, and connected to an individual, properly grounded branch circuit, protected by a circuit breaker or time delay fuse, as noted on the rating plate.

Wiring must conform to National Electric Codes.

If the electric service provided does not meet the above specifications, it is recommended that a licensed electrician install an approved outlet.

Because range terminals are not accessible after range is in position, flexible service conduit or cord must be used.

STEP 1

PREPARE THE OPENING

1½" spacing is recommended from the range to adjacent vertical walls above cooktop surface.

Allow 30" minimum clearance between surface units and bottom of unprotected wood or metal top cabinet, and 15" minimum between countertop and adjacent cabinet bottom.

EXCEPTION: Installation of a listed microwave oven or cooking appliance over the cooktop shall conform to the installation instructions packed with that appliance.

To eliminate the risk of burns or fire by reaching over heated surface units, cabinet storage space above the surface units should be avoided. If cabinet storage is to be provided, the risk can be reduced by installing a range hood that projects horizontally a min. of 5" beyond the bottom of the cabinets. Make sure the wall coverings and cabinets around the range can withstand heat generated by the range up to 200° F.

PREPARE THE OPENING (cont'd)

Flooring Under the Range

Your range, like many other household items, is heavy and can settle into soft floor coverings such as cushioned vinyl or carpeting. When moving the range on this type of flooring, use care, and follow these simple and inexpensive instructions.

The range should be installed on a 1/4 inch thick sheet of plywood (or similar material) as follows:

When the floor covering ends at the front of the range, the area that the range will rest on should be built up with plywood to the same level or higher than the floor covering. This will allow the range to be moved for cleaning or servicing.

STEP 2

PREPARE FOR ELECTRICAL CONNECTION

Use only a 3-conductor, or if required a 4-conductor range cord set as noted below. These cord sets are provided with ring type terminals.

The electrical rating of the cord must be 125/250 volts minimum, 40 amperes.

NOTE: Only a 4-conductor cord is to be used when the appliance is installed in a mobile home or where local codes do not permit grounding through the neutral.

STEP 3

1. Locate connector block at the bottom rear of range and remove rear wiring cover.
2. Directly below the connector block is a hole with a knockout ring for accommodating conduit fittings. Brackets provided are used to support the flexible cord strain relief, which must be securely attached to the cord set.

STEP 4

3-WIRE SYSTEM

Power Cord Installation—Insert screws through power cord terminals so that the screws pass through connector block terminals and engage nuts. Tighten screws securely.

Cable Direct Installation—Clamp bare wires between the connector block terminals and movable nuts with screws tightened securely.

1. Copper Wiring

Connect the neutral or grounded wire of the supply circuit to the neutral terminal of the connector block, located in the center. The power leads must be connected to the outside (brass colored) terminals.

WARNING: CONNECTOR BLOCK IS APPROVED FOR COPPER WIRE CONNECTION ONLY.

(continued next page)

INSTALLATION INSTRUCTIONS

(continued)

2. Aluminum Wiring

A. Connect length of copper building wire to range terminal block.

B. Splice copper wires to aluminum wiring using special connectors designed and U.L. approved for joining copper to aluminum, and follow the connector manufacturer's recommended procedure closely.

NOTE: Wire used, location and enclosure of splices, etc., must conform to good wiring practice and local codes.

STEP 5

4-WIRE SYSTEM

SPECIAL GROUNDING INSTRUCTIONS

WARNING:

Frame grounded to neutral of appliance through a link. If used in a MOBILE HOME or if LOCAL CODES do not permit grounding through the neutral:

- 1) disconnect the link from neutral,
- 2) use grounding terminal or lead to ground unit in accordance with local codes, and
- 3) connect neutral terminal or lead to branch circuit in usual manner.

(If the appliance is to be connected by means of a cord set, use 4-conductor cord for this purpose.)

STEP 6

ANTI-TIP BRACKET INSTALLATION

AN ANTI-TIP bracket is supplied with instructions for installation in a variety of locations. The instructions include a template, a parts list and a list of tools necessary to complete the installation. Read the IMPORTANT SAFETY INSTRUCTIONS and the instructions that fit your situation before beginning installation.

WARNING

1. Range must be secured by ANTI-TIP bracket supplied.
2. See instructions to install (supplied with bracket).
3. Unless properly installed, range could be tipped by stepping or sitting on door. Injury might result from spilled hot liquids or from range itself.

Typical installation of Anti-Tip bracket
Attachment to Wall

STEP 7

LEVELING THE RANGE

The range must be level. Leveling feet are located at each corner of the base of the range. Remove the storage drawer or kick panel (depending on your model) and using channel locks, rotate the leveling feet in and out as required to level the range. (For instructions on how to remove and replace the storage drawer or the kick panel, see the Cleaning Under the Range section in Care and Cleaning.) On some models, there are plastic covers which may be removed for easy adjustment (just squeeze and pull).

One of the rear leveling feet will engage the ANTI-TIP bracket (allow for some side to side adjustment). Allow a minimum clearance of 1/8" between the range and the leveling foot that is to be installed into the ANTI-TIP bracket.

Check the range for proper installation into the ANTI-TIP bracket (after the range has been properly installed) by grasping the edges of the REAR burner holes and carefully attempting to tilt the range forward.

STEP 8

FINAL CHECK

Be sure all switches are in the "off" position before leaving the range.

QUESTIONS? USE THIS PROBLEM SOLVER

PROBLEM	POSSIBLE CAUSE
“F- AND A NUMBER” FLASH IN THE DISPLAY	<ul style="list-style-type: none"> • If the time display flashes “F- and a number,” you have function error code. Press the CLEAR/OFF pad. Allow oven to cool for one hour. If the failure code repeats, disconnect all power to the range. Call for service.
OVEN WILL NOT WORK	<ul style="list-style-type: none"> • Plug on range is not completely inserted in the electrical outlet. • The circuit breaker in your house has been tripped, or a fuse has been blown. • Oven controls not properly set. • Door left in locked position after cleaning.
OVEN LIGHT DOES NOT WORK	<ul style="list-style-type: none"> • Light bulb is loose or defective. Tighten or replace. • Switch operating oven light is broken. Call for service.
SURFACE LIGHT DOES NOT WORK	<ul style="list-style-type: none"> • Fluorescent light is loose or defective. Adjust or replace. • Press and hold the switch for 2 seconds. If the light does not come on, repeat. • Switch operating light is broken. Call for service.
FOOD DOES NOT BROIL PROPERLY	<ul style="list-style-type: none"> • The oven is not set at BROIL. • Door not left open to the broil stop position, as recommended. • Improper shelf position being used. See the Broiling Guide. • Food is being cooked on hot pan. • Cookware is not suited for broiling. • Aluminum foil used on the broil pan rack has not been fitted properly and slit as recommended.
FOOD DOES NOT ROAST OR BAKE PROPERLY	<ul style="list-style-type: none"> • The oven is not set at BAKE. • Shelf position is incorrect. See the Roasting or Baking sections. • Oven shelf not level. • Incorrect cookware or cookware of improper size is being used. • The oven thermostat needs adjustment. See the Adjust the Oven Thermostat-Do <i>It Yourself</i> section.
OVEN TEMPERATURE TOO HOT OR TOO COLD	<ul style="list-style-type: none"> • The oven thermostat needs adjustment. See the Adjust the Oven Thermostat-Do <i>It Yourself</i> section.
CLOCK AND TIMER DO NOT WORK	<ul style="list-style-type: none"> • Make sure the electrical plug is plugged into a live, properly grounded power outlet. • Check for power outage. • See the Oven Control, Clock and Timer section of this guide.
SURFACE UNITS NOT FUNCTIONING PROPERLY	<ul style="list-style-type: none"> • Surface units are not plugged in solidly. • Drip pans are not set securely in the cooktop. • Surface unit controls are not properly set.

consumer information service

We'll Be There

With the purchase of your new GE appliance, receive the assurance that if you ever need information or assistance from GE, we'll be there. All you have to do is call—toll-free!

In-Home Repair Service ***800-GE-CARES (800-432-2737)***

A GE consumer service professional will provide expert repair service, scheduled at a time that's convenient for you. Many GE Consumer Service company-operated locations offer you service today or tomorrow, or at your convenience (7:00 a.m. to 7:00 p.m. weekdays, 9:00 a.m. to 2:00 p.m. Saturdays). Our factory-trained technicians know your appliance inside and out—so most repairs can be handled in just one visit.

GE Answer Center® ***800.626.2000***

Whatever your question about any GE major appliance, GE Answer Center® information service is available to help. Your call and your question will be answered promptly and courteously. And you can call any time. GE Answer Center® service is open 24 hours a day, 7 days a week.

For Customers With Special Needs... ***8006262000***

Upon request, GE will provide Braille controls for a variety of GE appliances, and a brochure to assist in planning a barrier-free kitchen for persons with limited mobility. To obtain these items, free of charge, call 800.626.2000.

Consumers with impaired hearing or speech who have access to a TDD or a conventional teletypewriter may call 800-TDD-GEAC (800-833-4322) to request information or service.

Service Contracts ***800-626-2224***

You can have the secure feeling that GE Consumer Service will still be there after your warranty expires. Purchase a GE contract while your warranty is still in effect and you'll receive a substantial discount. With a multiple-year contract, you're assured of future service at today's prices.

Parts and Accessories ***800-626-2002***

Individuals qualified to service their own appliances can have needed parts or accessories sent directly to their home. The GE parts system provides access to over 47,000 parts...and all GE Genuine Renewal Parts are fully warranted. VISA, MasterCard and Discover cards are accepted.

User maintenance instructions contained in this booklet cover procedures intended to be performed by any user. Other servicing generally should be referred to qualified service personnel. Caution must be exercised, since improper servicing may cause unsafe operation.

YOUR GENERAL ELECTRIC RANGE WARRANTY

Staple sales slip or cancelled check here. Proof of original purchase date is needed to obtain service under warranty.

WHAT IS COVERED

FULL ONE-YEAR WARRANTY

For one year from date of original purchase, we will provide, free of charge, parts and service labor in your home to repair or replace **any part of the range** that fails because of a manufacturing defect.

This warranty is extended to the original purchaser and any succeeding owner for products purchased for ordinary home use in the **48** mainland states, Hawaii and Washington, D.C. In Alaska the warranty is the same except that it is LIMITED because you must pay to ship the product to the service shop or for the service technician's travel costs to your home.

All warranty service will be provided by our Factory Service Centers or by our authorized Customer Care® servicers during normal working hours:

Should your appliance need service, during warranty period or beyond, call 800-GE-CARES (800-432-2737).

WHAT IS NOT COVERED

- Service trips to your home to teach you how to use the product.

Read your Use and Care material.

If you then have any questions about operating the product, please contact your dealer or our Consumer Affairs office at the address below, or call, toll free:

GE Answer Center®
800.626.2000
consumer information service

- Improper installation.

If you have an installation problem, contact your dealer or installer. You are responsible for providing adequate electrical, gas, exhausting and other connecting facilities as described in the Installation Instructions provided with the product.

- Replacement of house fuses or resetting of circuit breakers.
- Failure of the product if it is used for other than its intended purpose or used commercially.
- Damage to product caused by accident, fire, floods or acts of God.

WARRANTOR IS NOT RESPONSIBLE FOR CONSEQUENTIAL DAMAGES.

Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. To know what your legal rights are in your state, consult your local or state consumer affairs office or your state's Attorney General.
